

Online Appointment Scheduling

Introducing the PBS Systems enhanced
Factory Recommended Maintenance & Online
Appointment Scheduler For Canadian Mazda Dealers

Offer Complete Convenience

Customers may schedule their vehicle's service from their computer or mobile device at their convenience. This allows you to capture the work based on their availability and preference, especially if prefer to communicate digitally instead of in-person.

Let The System Help With Upselling

Utilize our VIN and mileage-driven data to provide accurate options for customer scheduling. Add to that the ability for your customers to quickly select wear-and-tear options (wiper blades, bulbs, etc) that reflect your pricing. Upsell more parts before even seeing the vehicle in the drive. The benefit? Added transparency that builds customer trust and your revenue.

Truly Seamless Workflow

Our online scheduling tools integrate seamlessly with the DMS to offer features like:

- Accurate appointment openings based on shop load
- Transparent pricing that recalculates with customer choices
- Chosen parts linked to the appointment
- Text/email notifications for "add to calendar" links and reminders
